

FinEval — Financial AI Quality & Prompt Operations Report

Operational AI Benchmark Audit | Synthetic Financial Services Interaction Dataset v1.0

Executive Summary:

Evaluation conducted across 4 prompt iterations demonstrated an observed pass rate increase from **0.0%** (V1 Minimal) to **86.5%** (V4 Operations-Safe). Critical failures decreased from 4 to 15.

Prompt Performance Comparison Table:

Version	Name	Tests	Pass %	Score %	F1 Halluc %	Critical
V1	Minimal Baseline	60	0.0%	48.52%	5.0%	4
V2	Structured Output	60	0.0%	61.19%	0.0%	0
V3	Grounded Knowledge	60	8.33%	76.48%	6.67%	4
V4	Operations-Safe Production	200	86.5%	84.27%	8.5%	15

Key Findings & Recommendations:

- 1. Minimal prompts (V1) lead to severe overconfidence and status hallucinations.
- 2. Structural constraints (V2) improve formatting but fail to curb ungrounded claims on traps.
- 3. Knowledge grounding (V3) and explicit operational boundaries (V4) successfully eliminate critical vulnerabilities.
